

## **ADVISORY --- Solar Panel Installation is Coming!**

Solar Panel Installation will begin with construction fencing being installed on Tuesday, October 23rd.

### **First Phase - October 23 – November 30 (approx.)**

The first phase of construction will affect a majority of senior parking areas in the Main parking lot located off Utica Avenue. The first phase will be located between Miller Field (Field Hockey/Soccer/Lacrosse) and along the Softball and Junior Varsity Baseball fences in front of the Gym. Additionally, the area behind the gym near the Urban Garden and connex boxes will be affected by construction but should have minimal impact on day-to-day operations. This area will be affected during the entire length of the project.

Students -- Seniors were given notice of the projected construction project during last year's parking permit distribution. Seniors are encouraged to walk, ride your bike, skateboard, or rideshare during both phases of construction. An additional bike corral will be built behind the gym near the football/athletics weight room near the "I" building to accommodate the additional bikes being ridden during construction. Students parking at First Christian Church will have an access point to campus located at the D-building corner next to the Soccer/Field hockey/Lacrosse field during construction. This gate will be opened at 6:30am and closed at 4:00pm everyday during both phases of construction.

Community -- Traffic patterns for pick up and drop off will be adversely affected for students, staff, and community during construction. During the first phase of construction, entrance and exit from the Utica entrance will be congested and Parents and Students are advised to find alternative forms of transportation. Student drop off and pick up will enter off of Utica turn towards the pool and wrap around the student parking areas and exit the campus on Utica at Main. EXPECT MAJOR DELAYS if you choose to drop your student off on this route.

Staff -- During the first phase of construction staff parking will not be affected, but staff is advised to leave plenty of time as they enter and exit the parking areas.

### **Second phase – November 26 (approx.) - March 1 (approx.)**

The second phase of solar panel installation will alleviate traffic flow, but will continue to negatively affect the number of parking spaces available to our visitors beyond the parking spaces located at the visitor parking area on the Utica Avenue entrance.

Students -- Senior parking will be negatively affected as staff parking will move to the current Senior parking areas. There will continue to be very limited senior parking and all seniors are advised to continue using alternative methods of transportation.

During our second phase, parking lot traffic flow will return to the normal entrance of cars on Utica, dropping students off at the pool area, and exiting out the rear parking lot to Adams Street.

Staff -- Staff parking will be affected. Staff will move to the Senior parking areas. It is suggested that buildings A, B, C, D, E, cafeteria, and Administration park in the main lot and the M, I, J, Stadium, Auditorium, PE, and Athletics use the back lot. Extra spaces will be chalked on the asphalt basketball courts behind the gym to provide extra spaces for staff. IMPORTANT: The cattle gate located at the courts will be unlocked at 6:30am every morning and locked at 4:00pm everyday.

During the length of the project, community and athletics parking will be affected. Due to parking space being cut by up to 150 spaces, parking will be an issue. That being said, access to the fields will be available to all athletic facilities and will not, at this time, affect event times and locations.

While we understand the timing is not ideal, we are happy to do our part for our environment by introducing renewable sources of energy the Huntington Beach Union High School District.

Thank you for your patience while we undergo this project on campus.

--

With Much Respect,  
Huntington Beach High School
